

## ***1. What is Playwright?***

Playwright is an open-source automation framework for end-to-end testing of web applications across Chromium, Firefox, and WebKit.

## ***2. Why is Playwright popular in 2026?***

It offers built-in parallel execution, auto-waiting, cross-browser support, and strong CI/CD integration.

## ***3. What is auto-wait in Playwright?***

Playwright automatically waits for elements to be ready before performing actions, reducing flaky tests.

## ***4. How do you install Playwright?***

Using npm: `npm init playwright@latest`.

## ***5. What browsers does Playwright support?***

Chromium, Firefox, and WebKit.

## ***6. What is a locator in Playwright?***

A locator identifies elements on a webpage for interaction.

## ***7. Best locator strategy?***

`getByRole` and `getByText` are recommended for stable and readable tests.

## ***8. What is Trace Viewer?***

A debugging tool that records test execution with screenshots and network logs.

## ***9. How do you run tests in parallel?***

Configure workers in `playwright.config.js`.

### ***10. What is Page Object Model?***

A design pattern that separates page logic from test logic.

### ***11. Difference between Playwright and Selenium?***

Playwright has built-in waits and parallel execution, Selenium requires more setup.

### ***12. What is headless mode?***

Running browser tests without UI.

### ***13. How do you handle dropdowns?***

Use `selectOption()` method.

### ***14. How do you handle alerts?***

Use `page.on('dialog', handler)`.

### ***15. What are fixtures?***

Reusable setup/teardown components in Playwright tests.

### ***16. What is CI/CD?***

Continuous Integration and Continuous Deployment for automated pipelines.

### ***17. How to integrate Playwright with GitHub Actions?***

Add a YAML workflow file to run tests on push.

### ***18. What causes flaky tests?***

Hard waits, unstable locators, timing issues.

### ***19. How to reduce flaky tests?***

Use proper locators and rely on auto-wait.

### ***20. What is API testing in Playwright?***

Using request context to test backend APIs.

### ***21. What is assertion?***

Verification step to validate expected results.

### ***22. Example assertion?***

```
expect(locator).toBeVisible();
```

### ***23. How to handle frames?***

Use `frameLocator()`.

### ***24. What is data-driven testing?***

Running tests with multiple datasets.

### ***25. How to read test data from JSON?***

Import JSON and loop through data.

### ***26. What is `test.describe`?***

Grouping related test cases.

### ***27. What is `test.beforeEach`?***

Runs before each test.

**28. What is `test.afterEach`?**

Runs after each test.

**29. What is cross-browser testing?**

Testing app across multiple browsers.

**30. What is smoke testing?**

Quick check of critical functionality.

**31. What is regression testing?**

Ensuring existing functionality works after changes.

**32. What is sanity testing?**

Quick validation of specific functionality.

**33. What is test strategy?**

High-level plan for testing approach.

**34. What is bug life cycle?**

Steps from bug identification to closure.

**35. What is severity vs priority?**

Severity = impact; Priority = urgency.

**36. What is DOM?**

Document Object Model representing webpage structure.

**37. How to handle dynamic elements?**

Use stable attributes or role-based locators.

**38. What is XPath?**

Language for navigating XML/HTML elements.

**39. What is CSS selector?**

Pattern to select HTML elements.

**40. What is retry in Playwright?**

Config option to rerun failed tests.

**41. How to generate HTML report?**

Use built-in reporter configuration.

**42. What is performance testing?**

Testing system speed and responsiveness.

**43. What is load testing?**

Testing system under expected user load.

**44. What is security testing?**

Testing system for vulnerabilities.

**45. What is agile methodology?**

Iterative development approach.

***46. What is sprint?***

Time-boxed development cycle in Agile.

***47. What is JIRA?***

Tool for tracking issues and projects.

***48. What is Git?***

Version control system.

***49. How to switch from manual to automation?***

Learn programming basics, choose tool, build projects.

***50. What makes you job-ready in 2026?***

Strong fundamentals, Playwright skills, CI/CD knowledge, and AI-assisted testing awareness.
